IP65 12W/m TW 5m

LED light rail/LED strip

Ambiance LED strips can be used to create effective indirect general lighting or atmospheric accent lighting. The stepless control of the LED strip's white colour temperature from warm to cold enables a wide variety of choices for general lighting. The IP20 and IP65 models of the strip enable it to be mounted in many different places. With the high level of luminous flux, the strips are particularly suitable for surface reflection to create non-glare indirect lighting in a room. A strip can be mounted on the window jamb or on the back of furniture, paintings and mirrors. An LED strip mounted on the underside of steps or on handrails provides extra safety on staircases. The IP65 strip is suitable for wet spaces. It can be mounted beneath kitchen cabinets, or above them for the soft reflection of light from the ceiling. The high luminous flux and excellent colour rendering qualities enable a wide variety of uses in public spaces. The series also includes a ready-to-use IP20 package, containing the LED strip and all the necessary components
